## General Risks

- As the Fund invests in debt securities (e.g. bonds) it is subject to credit risk (the risk of a bond issuer failing to pay) and interest rate risk (the risk of changes in interest rates).
- The Fund may also invest in CCBs, these bonds have additional risks such as the risk that following certain trigger events, including an issuer's capital ratio falling below a particular level, the bond may be converted into the issuer's equity or its principal amount may be written down, resulting in losses for the Fund.
- The Fund can invest in FDI. These instruments have additional risks such as legal risk or liquidity risk (the inability to sell the contract due to lack of buyers in the market). These risks can have adverse impacts on the overall value of the Fund.
- The lack of common reporting standards may result in different assessments of ESG / sustainability criteria to screen out investments. In this regard, the ESG exclusion screening may cause the Fund to forego investment opportunities, and this may cause a loss to the Fund.
- The Fund's investments may be in currencies other than Euros. The impact of this is that as the value of a currency rises or falls it can have a positive or negative impact on the value of the Fund's investments.

For a complete overview of all risks attached to this Fund, refer to the section entitled "Risk Factors" in the Supplement and the Prospectus.
