Fund Objective

The Algebris Financial Credit Fund aims to achieve a high level of current income and modest capital appreciation by investing in senior and subordinated debt securities of the financial credit sector globally including preference shares and hybrid capital instruments (e.g. Additional Tier 1 securities), which may be rated investment grade or below investment grade.

Currency exposure will be systematically hedged.

Investment in the Fund may be suitable for investors with a medium to long term investment horizon.

General Risks

- As the fund invests in debt securities (e.g. bonds) it is subject to credit risk (the risk of a bond issuer failing to pay) and interest rate risk (the risk of changes in interest rates).
- The strategy employed may result in the NAV exhibiting a high level of volatility. The Fund may be leveraged which can potentially increase losses. This Fund may invest in contingent convertible securities. These securities have unique risks, for example, due to equity conversion or principal write-down features which are tailored to the issuing entity and its regulatory requirements, which means the market value of the securities may fluctuate. Additional risk factors associated with contingent convertible securities are set out in the Fund's Prospectus. There is no secondary market for investments in the Fund and none are expected to develop. The Fund may lack diversification. The Fund's high fees and expenses may offset the Fund's trading profits.
- The fund can invest in emerging markets. Such markets carry additional risks such as political instability, weaker auditing and financial reporting standards and less government supervision and regulation.
- The fund's investments may be in currencies other than Euros. The impact of this is that as the value of a currency rises or falls it can have a positive or negative impact on the value of the Fund's investments.
- The fund can invest in Financial Derivative Instruments (FDI). These instruments have additional risks such as legal risk or liquidity risk (the inability to sell the contract due to lack of buyers in the market). These risks can have adverse impacts on the overall value of the fund and its level of volatility.
- For a complete overview of all risks attached to this fund, refer to the section entitled "Risk Factors" in the Supplement and Algebris UCITS Funds plc Prospectus.

Note: When an investor purchases or sells shares, an additional charge called an Anti-Dilution Levy (ADL) or dilution adjustment may be payable respectively on net subscriptions for shares and net redemptions of shares from the fund in order to cover the costs incurred by the fund in buying or selling investments. The level of the ADL can vary over time and can reach up to 1.5%. Further information on the ADL can be found in the Supplement and Algebris UCITS Funds plc Prospectus.

Glossary

Annualised volatility: The Annualised volatility measures the extent to which returns vary up and down over a given period. The measure is expressed as an annualised value.

Sharpe ratio: The Sharpe ratio measures the performance of an investment adjusting for the amount of risk taken (compared to a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.

Effective duration: Duration is the price sensitivity (expressed in years) of a fixed income security to a change in interest rates. Effective duration is a duration calculation for bonds that have embedded options. A higher (effective) duration indicates a higher price sensitivity.

Current yield: The Current yield is calculated as the security's anticipated annual income (interest for fixed income instruments or dividends for equities) divided by the current price of the security. Current yield represents the return an investor would expect if they purchased the bond and held it for a year. The reported yield is gross of fees and expenses.

Yield to worst: The yield to worst (YTW) is the lowest potential yield that can be received on a bond which can be redeemed by the issuer on a call date which is earlier than the final maturity date. The reported yield is gross of fees and expenses.
